

Shoulder-Mic Systems

Shoulder-Mic systems have become commonly issued two-way radio communication equipment for law enforcement and security teams worldwide. In addition to their professional use, several others have found these to be durable equipment for retail outlets, park security, range or outdoor facility management and general recreational activities.

Depending on your requirements, we offer several models from the very basic to the very advanced featuring add-on accessories such as throat-mics, skull-mics, GPS locator, SCBA breathing systems, lightweight headsets and listen-only earphone kits. We even offer one with LED lights for better viewing under poor lighting conditions.

Shoulder-Mic's are an excellent way to communicate with others out in the field and can be enhanced with isolating custom earpieces as well. This prevents others from hearing important radio traffic and keeps the system in a "silent" mode of transmission, allowing only the user to hear the conversation. This is important when doing traffic stops or when covert communications within a courtroom or security checkpoint are needed.

Custom earpieces

Custom earpieces add value in what is being heard and understood during a critical operation or general patrol duties, improving radio traffic communication between officers and dispatch.

E.A.R. Chameleon Ears™ are super soft hydrophobic silicone earplugs. We can outfit these molds with acoustical filters which provide excellent protection against high level impulse noises and excellent speech recognition for motorcyclists, dentists, shooting enthusiasts and musicians.

Available in a variety of brilliant solid colors as well as ones which change colors or glow in the dark.

Note: This product is produced for listening to audio/communication devices. Please remain aware of the dangers of listening to these devices at a loud volume level (85dB+). OSHA regulations state a volume of 80-85dB is safe for an eight hour period of time. If you are concerned about your hearing, please consult a hearing specialist who can advise you about your safety levels with your audio device.

Standard Product Specifications

Color: Tactical Black
 PTT: Standard Side-Finger Switch
 Earphone Jack: 2.5mm, 3.5mm or
 3.5 mm Threaded

Radio Compatibility

Motorola	Relm	Kenwood
M/A Com	Maxon	E.F. Johnson
