

Throat-Mic Systems

Throat-mic systems are extremely good options for the professional looking to use a breathing apparatus or requiring nothing in front of their mouth/face or over their head. This includes fire departments, HAZ-MAT crews, correctional facilities, law enforcement and military personal and general recreational users.

Most of our throat-mic systems are designed with an adjustable elastic strap that fits around the users neck and picks up communications through vibrations from vocal input or bone conduction. These transmissions can be as soft as a whisper or as loud as a shout. The mic elements attached to the strap interpret the vibrations and transmit the signal to the other members using the same channel of communications.

Additional options include remote PTT switches, custom-fit earpieces, switch guard protectors, a variety of listening headsets and electronic earplugs.

Custom earpieces

Custom earpieces add value in what is being heard and understood during a critical operation or general patrol duties, improving radio traffic communication between officers and dispatch.

E.A.R. Chameleon Ears™ are super soft hydrophobic silicone earplugs. We can outfit these molds with acoustical filters which provide excellent protection against high level impulse noises and excellent speech recognition for motorcyclists, dentists, shooting enthusiasts and musicians.

Available in a variety of brilliant solid colors as well as ones which change colors or glow in the dark.

Note: This product is produced for listening to audio/communication devices. Please remain aware of the dangers of listening to these devices at a loud volume level (85dB+). OSHA regulations state a volume of 80-85dB is safe for an eight hour period of time. If you are concerned about your hearing, please consult a hearing specialist who can advise you about your safety levels with your audio device.

Standard Product Specifications

PTT: Large, hand activated
 Earpiece – Standard Generic Eartip
