

New HearPlugz-DF™ Hearing Protection: Breakthrough Technology from E.A.R., Inc. Wins Occupational Safety & Health's New Product of the Year Award!

Never before available, **HearPlugz-DF™** multifunctional dual-filtered hearing protectors are designed to help you hear speech better in noise or loud sound and can be hooked up to radio communications!

According to military, law enforcement, sportsmen and industrial groups, many standard hearing protectors go unused because they minimize one's ability to hear critical sounds needed for communications and environmental awareness. In response to these concerns, E.A.R., Inc. now provides this advanced technology. Breathable, moisture-resistant, dual acoustical filters improve sound quality when the ear is overloaded with excess noise (continuous or impact). Dual filters provide the user with a choice of two levels of noise reduction. Musicians especially will appreciate HearPlugz-DF's acoustical response.

HearPlugz-DF™ are available in a choice of colors, three sizes, and with a removable cord. The exterior filter can be easily removed if less attenuation is desired or to connect radio communications.

As an added service, users can have the generic (non-custom) style upgraded to a custom model by returning the filters with a set of ear impressions to E.A.R., Inc or one of its authorized providers.
