Sound Scope Automatics

Product Information

Field Test Ratings

Com fort	9.1
Performance	10.0
Safety features	10.0
Size	10.0
Overall rating	9.7

Favorite Feature

Versatility

This product is designed to give users the ability to switch from a lower output for repetitive target shooting to a higher output for increased sound enhancement while hunting. The units provide the distinct advantage of hearing a target before seeing it and have become a popular form of hearing protection for shooting and hunting enthusiasts. Contact: E.A.R. Inc./Starkey Labs at (800) 525-2690 or visit www.earinc.com.

Kenneth Davis, Austin, Texas: "The ear pieces are great. I like that they're custom made and not only enhance your hearing but protect it also. They're comfortable to wear and discreet. I use mine for shooting clays and turkey hunting."
Tom Thompson, Blowing Rock, North Carolina: "These make a great addition to my hunting and shooting sports bags. They're custom fit, comfortable and offer adjustable volume with an automatic high decibel shut-off to protect your ears from harmful noises."
